

Activation of the service Internet banking Plus (IB Plus)

Guide by first activated transaction in Internet Banking plus

Before setting the first active transaction in Internet Banking, please verify, if you have installed a signing component for Internet Banking Plus.

You can download it at the VUB pages in [Internet Banking Plus](#) section.

Service activation is conditioned by client certificates issued by the bank on a chip card. The following presentation will help you to set up the first transaction requiring an electronic signature in Internet Banking Plus.

As a sample transaction has been selected a simple transfer order.

Install chip card reader by the **VUB CryptoPlus** program. You can download it by clicking on this [hyperlink](#). During the installation you will choose, if it is table card reader or USB card reader. Thereafter put the chip card into the card reader and connect it to the computer.

Open VUB Internet Banking login page at www.vub.sk by clicking on the option Internet Banking. Enter your ID, PIN and Password, and sign in to Internet Banking.

The initial page – My accounts – is displayed. Select the option Payment/Collection from the menu Payment orders and complete it in a standard manner.

Click on **Check data**.

The screenshot shows the VUB BANKA internet banking interface. The header includes the bank logo, the name 'VUB BANKA', and the date '28.11.2011'. The main navigation menu on the left lists various services such as 'Accounts', 'Domestic payments', 'Payment', 'Intl payment orders', 'Collection', 'Payment cards', 'Loans', 'Investments', 'SMS and e-mail services', 'Statements', 'Settings', and 'Recharge credit'. The 'Payment' section is currently active, displaying a form for entering transaction details. The form includes fields for 'Client' (Account number: 2356763753), 'Partner' (Beneficiary: -- select --), 'Transaction data' (Amount: 100,00 EUR, Maturity date: 02.01.2012), and 'Send transaction confirmation to' (E-mail address: testu@vub.sk). A 'Verify data' button is highlighted with an orange box.

A window will appear and you can review data entered in the payment order. After clicking on the button **Perform transaction**, Electronic signature authorization window appears, where you will set up data necessary for signing transactions by electronic signature.

Note: You can find detailed description of set-up on the link [Help](#).

VUB bank issues electronic certificate on a chip card only, which can be used by table card reader or USB reader. IB Plus activation is the same for both types of readers.

Postupujte nasledovne:

- 1.** Firstly, tick the option Certificate on a chip card and click on the button **2. Select certificate**
- 2.** The window – List of certificates on chip card with your signing certificate– appears. Click on the line containing information about your certificate. Then click on the button **Confirm**.
- 3.** Sign the transaction by clicking on the button **3. Sign transaction**.
- 4.** Window – Check PIN – appears. Enter PIN you get to your chip card and click on the button OK.
- 5.** In case a window with information on transfer order acceptance and receipt number appears, congratulation to your first transaction via Internet Banking Plus signed by electronic signature.

Graphic delineation of process can be found on the next page

What next?

The following applies to all future transactions to be signed by your electronic signature:

After pressing the button Perform transaction, you will be requested to enter the password of your chip card's PIN. (you will find it in the accompanying letter to chip card, under the safe foil). After the correct password or PIN is entered, transaction will be signed.

If you have done reinstallation of operating system since the last transaction was signed, you must repeat the process above.

This is done by cancelling the option Apply existing electronic signature settings in the form with data on transaction confirmation. After pressing the button Perform transaction, the window Authorization by electronic signature reappears, where you can make the necessary set-up. You can sign the transaction right in this window by pressing the button **3. Sign transaction**.

This procedure can be applied also in case you only want to view data on your certificate for electronic signing.
